

Four musicians on acoustic instruments: three kamale n'goni stations, djembe, calabash, and a dundun set of three drums. Channel numbers below match the stage plot and input list.

We play 45, 60, 90, or 120 minute sets.

What we need from the venue

ITEM	DETAIL	CHANNELS
DI boxes	3 minimum, one per kamale n'goni. 6 if available, so each n'goni can run a second DI.	1, 4, 7 (2, 5, 8 optional)
Vocal mics	5 vocal mics on boom stands: one at each n'goni station, one at the djembe, one at the calabash.	3, 6, 9, 11, 13
Djembe mic	1 dynamic mic (SM57 or similar) on a short or low kick stand, placed low.	10
Calabash mic	1 wired mic placed underneath the calabash shell, on a blanket on the band's table. Shure Beta 91A preferred; a kick mic also works well.	12
Percussion overheads	2 overhead mics on boom stands, stage left and stage right of the percussion pair.	14, 15
Dundun mics	2 overhead mics on boom stands, stage left and stage right of the dundun set, plus 1 kick-style low mic on a floor stand.	16, 17, 18
Monitors	3 wedge mixes: W1 stage left, W2 center, W3 stage right.	

18 channels total. Channels 2, 5 and 8 are optional secondary DIs and can be dropped on a smaller console, for a 15 channel minimum.

The band brings all instruments, the calabash table, and the blanket. Everything above is requested from the venue.

Stage plot, input list, and this rider are in the press kit at sanji.band/sanji-press-kit.html.
